

Teknatool Woodturning Projects

Project # 3 Footroller

January 1997

FREE to all Teknatool Users!
Collect the series - a new one
every month! Ask your local
reseller for your copy or visit
our Website to download

Inspired by a suggestion from a tired sales executive! This would also be
perfect for soothing aching shopping feet after the busy Christmas season -
sit back and roll your way to relaxation! *Trevor Cole*

Tools Required

- Gouge
- Skew Chisel
- Beading Tool
(optional)

Materials Required

Size

150 to 180mm long x
50 to 60mm square of
any readily available
timber

Optional

2 x O rings in
diameter to suit timber
size

Job Sequence

Mark diagonal lines on each end to locate centre. Mount in the lathe between centres and turn to a cylinder.

Mark the centre of your cylinder and the width of the beads each side of the centre. Use the skew or beading tool to roll the beads. Cut a core at each end to seat the O-ring if you choose this option. make sure your beads are well rounded and smooth!

Finishing

Sand Smooth to 240 grit. Shell-lac oil or varnish are suitable finishes.

Variations

Timber, number and size of beads are a few starting suggestions. If you don't want to use O-rings, I would allow the roller to move on slightly larger Ø beads (one at each end)

Project Review
